

Persistent Organic Pollutants

REGULATION (EU) 2019/1021 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL
of 20 June 2019 on persistent organic pollutants

Dear Customer

"Persistent organic pollutants (POPs) are chemicals that remain in the environment for long periods, can be transported across international boundaries far from their sources via air or water, accumulate in humans and wildlife, and have harmful effects on human health and the environment. In the EU, POPs are regulated by Regulation (EU) 2019/1021 on Persistent Organic Pollutants. The Regulation covers a range of industrial chemicals, pesticides, by-products and chemicals produced unintentionally due to incomplete combustion, and describes the regulatory action for each of the listed chemicals. Some POPs are banned to produce and use and for some POPs, production and use are severely restricted. The POPs Regulation implements the global treaty on POPs, the Stockholm Convention, in the EU"

We hereby confirm that all the raw materials we use for production are not specified on regulation (EU) 2019/1021 on Persistent Organic Pollutants.

If you have any further questions concerning the above regulation, please do not hesitate to contact us.
